

When you go flying in an airplane you must know how to wear your seatbelt.

You also need to know how to take it off in case there was an emergency.

Everyone needs to wear a headset when they go flying in a small airplane.

Headsets protect your ears and allow you to talk to the pilot.

You will also be able to hear the pilot talking to other airplanes and the people who work at the Air Traffic Control Centre.

It is important that you do not speak when you hear a message being broadcast over the radio.

**It might be for you!**
